Senior Software Engineer

We are on a mission to transform insurance through the power of technology. Our next generation SaaS platform provides a single architecture that is uniting and strengthening the industry. Products, markets, channels and insurance parties come together seamlessly across all geographies. It is a new and exciting model, and it's shaping the future of insurance.

Our Singapore office needs a Senior Software Engineer to help us achieve our goals. You'll be part of an exciting and dynamic delivery team focusing on the entire software lifecycle and will work closely with our clients and our platform and design teams, ensuring they have everything they need to meet all their targets.

Job profile, skills and experience

- Design, code, document and test software across both frontend and backend primarily in TypeScript and Kotlin
- Take ownership of all aspects of our software platform including architecture, quality, and scalability
- Collaborate with other talented engineers, designers, product managers and more
- Work with clients when needed
- Mastery of a long list of languages and technologies across both front-end and back-end accumulated over the years
- Track record of building and maintaining large-scale software platforms
- Solid understanding of testing, continuous integration and deployment practices
- Demonstrated ability to proactively manage tasks, projects and issues
- Someone that gets bored working only in one area and wants to get their hands dirty in all aspects of software development, deployment, and operation
- Wants to be part of a team of highly experienced engineers and designers striving to deliver innovative solutions
- Has the desire to work in a start-up environment where things move quickly, and everyone wears multiple hats

Pluses:
- Extensive experience developing back-end software with Kotlin
- Or extensive experience with front-end development using Vue.js and TypeScript
- Or extensive experience with infrastructure automation including areas such as scalability and security

Our culture, your future

Working for Uncharted, you will be joining a global team with an exciting future. We are moving fast, taking technology to the limits, and reshaping the world of insurance. There is a creative energy and determination about everything we do, a collective commitment to transform an industry that is conservative and tradition based.

That is why we need people who can share our vision, people with the conviction and qualities to make a real difference. Can you rise above the ordinary and the average? Do you have the drive and ambition to take insurance technology to new levels?

- You thrive on challenges and are never short of ideas and insights
- You see problems as opportunities to create something better
- You are confident working on your own initiative but are a committed team member who knows that great things can happen when the right people come together
- You take pride in your work – and the company you work for – and love being part of an organisation that has bold plans and innovation at its core
- You never forget that innovation and customer needs are inseparable

Other opportunities

We are always keen to speak to people with backgrounds and experience that could be valuable to Uncharted. So if this role isn't right for you, but you have other skills to offer, drop us a line at careers@uncharted.global

Note: *Uncharted will not accept unsolicited resumes from recruitment firms. Nor will fees be paid if we hire a candidate for whom a recruiter has submitted an unsolicited resume.*

We are an equal opportunity employer. Candidates will be judged entirely on individual merit.
